

Plant Tour: Sustainability & Energy at Honda's Marysville Automobile Manufacturing Plant

Register soon for this!

DATE: Wednesday, Sept. 20, 2017

TIME: 9:45 a.m. – 2:00 p.m.

Many manufacturers now have sustainability goals and reporting initiatives integrated into their operations. And, their customers and investors grade company performance, in part, on sustainability achievements.

Further, these sustainability goals and metrics are increasingly being requested of supply chain partners.

To help OMA members network, learn and share about sustainability goals, practices and projects, the OMA created the **Sustainability Peer Network**.

An upcoming event of the **Sustainability Peer Network** is a tour of Honda's Marysville Automobile Manufacturing Plant. Energy, water, waste, and other sustainable projects and initiatives will be showcased.

Attendance is limited to 40 participants.

Tour Details

- Arrive at the Honda Watson Wellness Center parking lot and proceed to the Honda Operations Office Auditorium ([map](#))
- PPE *required*: Steel-toed footwear, hearing protection, safety glasses
- Must have photo ID
- Additional [general Honda tour details](#)

Our Honda Host

Dirk Nordberg is a Senior Staff Engineer for Honda of America Manufacturing. Dirk's career of 34 years with Honda has taken him through welding and facilities prior to serving as the Marysville Auto Plant Facilities Manager and Green Factory Leader for 7 years. Dirk is currently the Environmental and Facilities Cross-Functional Leader for Honda of America Manufacturing. His responsibilities include creating and managing the company Environmental business plan, promoting a culture of environmental awareness, engaging the association population, working with company leaders, and supporting facilities infrastructure and operation activities.
